s@fe2click

What is s@fe2click?

s@fe2click is a patent pending electronic message verification system combatting phishing, spoofing and man-in-the-middle attacks.

s@fe2click is proactive, user-centric & intuitive.

s@fe2click is a Microsoft Outlook Add-in installed on your company's PC's that incorporates whitelisting and individual user customization.

Why we created s@fe2click

s@fe2click was created to increase your organizational efficiency & effectiveness.

s@fe2click was created to protect your organization from the inside out, starting with your employees.

s@fe2click was created so your employees can trust their emails and do their jobs with confidence.

How s@fe2click works

s@fe2click validates email accounts via whitelisting including, but not limited to, your employees and business partners.

s@fe2click validated accounts send traditional emails to other validated accounts in addition to a message log to the cloud.

s@fe2click validated accounts receive a message and check it against the message log in the cloud. Confirming that the message is validated or not.

s@fe2click displays the validated messages according to the users' personalized settings (font, size and color).

What s@fe2click fans are saying

s@fe2click "allows our employees to easily identify safe emails."

s@fe2click "uses existing infrastructure to add an additional layer of security to our email system."

s@fe2click "makes it extremely difficult for man-in-the-middle attacks."

s@fe2click "...it's easy to use and provides our employees with the confidence they need to perform."

s@fe2click in action
